

iMedConsent Update

Solve a problem before it occurs.

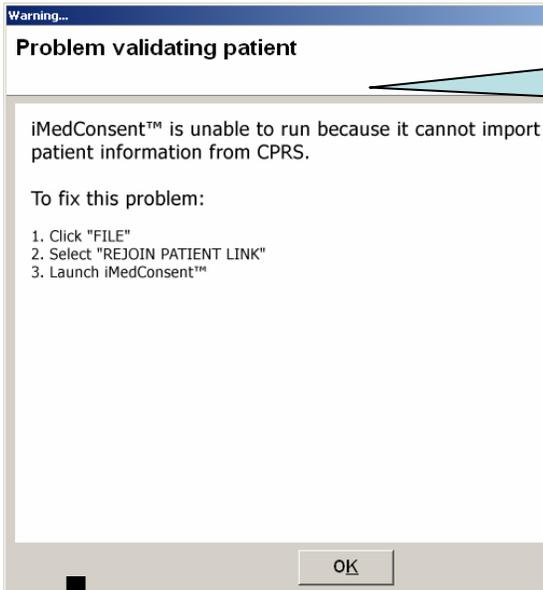

If you will be using iMedConsent, make sure this icon is visible in the bottom right hand corner of your screen *before you double click on the CPRS Chart icon*. It has 2 Green Squares over each other. This program launches the little blue guy in the corner of CPRS to help launch iMedConsent.

When you launch CPRS, you must have a single blue person at this location to run iMedConsent from CPRS.

This is the error message you will see if you don't have the single blue guy in the upper corner of CPRS. Caused by one of the two problems below.

If there are no figures here at all, this will stop iMedConsent from starting and give you the stop sign error. You must close and reopen CPRS when the two green squares are running in the bottom right hand corner of your screen.

Multiple figures here will stop iMedConsent from starting and give you the error message with the stop sign. You can click on "File" and then "Rejoin Patient Link", "Set New Context" to fix this issue. Then restart iMedConsent.
